

QA Checklist

Halal Business Initiative — Sponsored Website

Live site	https://takweenconnect.co.uk
Also reachable at	https://www.takweenconnect.co.uk · https://halal-business-website.takweencentreuk.workers.dev
Admin panel	https://takweenconnect.co.uk/admin/login
Scope	Full manual QA pass — landing page, apply form, admin panel
Document location	/docs (this project)

Admin login (for testing the admin panel)

Ask your team lead / check the internal password manager for current admin credentials.

Credentials are intentionally not printed in this document — it lives in a public repository.

How to use this checklist

Work through each section in order. Tick the box next to each step once you've done it and it matches the "Expected" column. If a step doesn't match, note what actually happened next to it (or on a separate bug list) instead of just leaving it unchecked, so it's clear whether it was skipped or failed.

Test on both a desktop-width browser window and a phone (or a resized/mobile-emulated browser window, roughly 375px wide) — several sections call out mobile-specific checks separately.

1. Landing Page (/)

URL: <https://takweenconnect.co.uk/>

1.1 Hero section

STEP	EXPECTED RESULT
☐ Load the homepage fresh (hard refresh / private window)	Page loads without console errors; 2-column layout (text left, video right) on desktop
☐ Watch the promo video on load	Video attempts to autoplay; if audio is blocked by the browser it silently falls back to muted autoplay — either way it starts playing, and video controls are visible
☐ Let the video play to the end	It loops automatically, muted, from then on
☐ Click the video's native pause/mute controls	Controls work normally (this satisfies accessibility — a way to stop autoplaying media)
☐ Read the headline, cost line, and bullet points	Copy is legible, no truncation or overlap
☐ Check the trust line under the buttons	Reads "Reviewed by a real person, not an algorithm." — <i>not</i> a star rating or numeric review count
☐ Click "Apply for a Sponsored Website"	Navigates to /apply
☐ Click "See How It Works"	Smooth-scrolls down to the "How the Process Works" section

1.2 Content sections (scroll through the full page)

STEP	EXPECTED RESULT
☐ Stats bar (£0 / Pages / Revision rounds)	All three figures display correctly
☐ "Who It's For" grid	7 business-type items listed with icons
☐ "The Current Digital Problem" section	Reads correctly, no placeholder text
☐ "What the Website Solves" section	Reads correctly
☐ "Why It's Sponsored" section	Reads correctly
☐ "What's Included" section	Green checkmarks next to each included item

☐ "What's Outside Scope" section	Uses a distinct <i>exclusion</i> icon (not a green checkmark) — these are things not included
☐ "Domain, Hosting & Third-Party Costs" section	Reads correctly
☐ "What Happens After Launch" section	Reads correctly
☐ "Who Qualifies" / "Who's Not a Fit" section	Two clearly distinguished lists

1.3 Limited Monthly Capacity (live data — important)

This section reads real, live data from the database on every page load — it is **not** a fixed number. If it always shows the same number no matter what, that's a bug worth flagging.

STEP	EXPECTED RESULT
☐ Scroll to "Limited Monthly Capacity"	A circular progress ring animates in (stroke draws in, number fades/scales in)
☐ Read the number in the ring	Shows "X of 5 left" where X is a real remaining-spots count for this calendar month
☐ Cross-check against the admin dashboard (see section 5) if possible	The count is consistent with actual accepted applications this month

1.4 Process, Portfolio, FAQ, Final CTA

STEP	EXPECTED RESULT
☐ "How the Process Works" — 6 numbered steps	Apply → Review → Discovery → Build → Review & Launch → Feedback & Close-Out
☐ Portfolio / testimonials section	Does not show fake reviews, star ratings, or invented case studies — held back honestly if empty
☐ Expand each FAQ item	All 8 questions expand/collapse and read correctly, no lorem ipsum
☐ Final CTA banner at the bottom	"Apply for a Sponsored Website" button present and working
☐ Footer disclosure line	Reads "A Takween Digital Services initiative"

1.5 Mobile check (resize browser to ~375px wide, or use a phone)

STEP	EXPECTED RESULT
------	-----------------

☐ Scroll the entire homepage top to bottom

No horizontal scrollbar, no clipped/cut-off text anywhere

☐ Check the header logo/wordmark

Doesn't overflow or overlap other elements

☐ Check the Hero video

Scales to fit width, doesn't overflow

2. Programme Terms Page

URL: <https://takweenconnect.co.uk/programme-terms>

STEP	EXPECTED RESULT
☐ Load the page	Loads with an intro disclosure line at the top
☐ Count the numbered terms items	14 items, each with a clear title and body
☐ Read item 1 ("Relationship and Disclosure")	Names both "Halal Business Initiative" and "Takween Digital Services" clearly, reads naturally (no repeated words like "Initiative initiative")
☐ Read the item about featuring feedback/portfolio consent	Exact consent wording is quoted and reads naturally
☐ Click any in-page link back to the homepage	Works correctly

3. Apply Form

URL: <https://takweenconnect.co.uk/apply>

3.1 Step 1 — Your Business

STEP	EXPECTED RESULT
☐ Click "Next" with all fields empty	Validation errors appear under Business Name, Business Type, Years Operating; step does not advance
☐ Fill in Business Name, select Business Type and Years Operating, click Next	Advances to Step 2

3.2 Step 2 — Online Presence

STEP	EXPECTED RESULT
☐ Leave every field blank, click Next	Advances — this whole step is optional
☐ Go back, fill in an Instagram handle and a website URL without "http://"	Website URL field shows a validation error asking for a full URL starting with http:// or https://

3.3 Step 3 — About You

STEP	EXPECTED RESULT
☐ Enter fewer than 10 characters in "Services description", click Next	Validation error asking for at least 10 characters
☐ Fill in a real description, biggest challenge, and select content readiness, click Next	Advances to Step 4

3.4 Step 4 — Contact

STEP	EXPECTED RESULT
☐ Enter an invalid email (e.g. "notanemail"), click Next	Validation error asking for a valid email address
☐ Fill in a real name, valid email, and phone number, click Next	Advances to Step 5

3.5 Step 5 — Review & Submit

STEP	EXPECTED RESULT
☐ Check the summary of what you entered	Business name/type and contact name/email shown correctly match what you typed

☐ Click Submit without ticking either consent checkbox	Cannot submit — validation blocks it
☐ Tick both consent checkboxes, but don't complete the verification widget, click Submit	Message: "Please complete the verification widget above before submitting."
☐ Complete the "Verify you are human" widget	Widget shows a success state
☐ Click "Submit Application"	Button shows "Submitting...", then the form is replaced by a thank-you screen

3.6 Thank-you screen

STEP	EXPECTED RESULT
☐ Watch the character illustration on load	A smiling star-badge character pops in with a little bounce, then settles into a gentle idle bob, with small twinkling sparkles around it
☐ Read the heading and body text	"Application received!" plus a message that the team will email either way
☐ Check the reference number shown	An 8-character reference code is displayed (e.g. "Reference: A1B2C3D4")
☐ Check your email inbox (the one used in Step 4)	A confirmation email arrives with the same reference number
☐ Cross-check the reference number against the admin dashboard (section 5/6)	A new application appears in the admin list with a matching ID and the exact details you entered

3.7 Error handling

STEP	EXPECTED RESULT
☐ Submit the form, then quickly go offline / disable network before it finishes	Shows "Couldn't reach the server. Check your connection and try again." rather than hanging silently

4. Admin Login

URL: <https://takweenconnect.co.uk/admin/login>

STEP	EXPECTED RESULT
☐ Try any protected admin URL directly (e.g. /admin/applications) while logged out	Redirects to /admin/login
☐ Enter a wrong username or password, click Log in	Shows an invalid-credentials error, stays on the login page
☐ Enter the correct credentials (ask your team lead), click Log in	Redirects to /admin/applications and actually shows the dashboard (not bounced back to login)
☐ Click "Log out" from the dashboard header	Returns to /admin/login; protected pages are inaccessible again until you log back in

5. Admin Dashboard — Applications List

URL: <https://takweenconnect.co.uk/admin/applications> (log in first)

STEP	EXPECTED RESULT
☐ Check the "Total applications" stat card	Shows an icon + a real count matching the number of rows in the table below
☐ If there are zero applications	Shows an animated empty-state illustration ("No applications yet") instead of a blank page
☐ If there are applications, check the table columns	Business, Contact, Type, Status, Score, Submitted — all populated correctly
☐ Submit a fresh test application (section 3), then reload this page	The new row appears immediately at the top (newest first) — this page always shows live data, never a cached/stale list
☐ Click a business name in the table	Opens that application's detail page

6. Admin — Application Detail & Review

URL: <https://takweenconnect.co.uk/admin/applications/<id>>

STEP	EXPECTED RESULT
☐ Open a real application from the list	Business name, status badge, and reference/submitted date shown at the top
☐ Check the Business / In their words / Contact cards	All fields match exactly what was submitted (compare against your own test submission from section 3)
☐ Click the applicant's email address	Opens your email client with a new message addressed to them
☐ In the Review card, change Status to a different value, add a Score and Notes, click "Save review"	Page reloads showing the new status badge, score, and notes correctly saved
☐ Leave "Reviewer" blank when saving	Reviewer is auto-filled with your logged-in admin username
☐ Refresh the page after saving	All saved values persist correctly (confirms it's really saved to the database, not just shown temporarily)

7. Cross-Cutting Checks

7.1 Domain & hosting

STEP	EXPECTED RESULT
☐ Visit <code>https://takweenconnect.co.uk</code>	Loads the site correctly over HTTPS
☐ Visit <code>https://www.takweenconnect.co.uk</code>	Loads the same site (may take a little longer to work if DNS is still propagating)
☐ Visit <code>https://halal-business-website.takweencentreuk.workers.dev</code>	Also still loads the same site

7.2 SEO / metadata

STEP	EXPECTED RESULT
☐ Visit <code>/sitemap.xml</code>	Lists the site's pages using the <code>takweenconnect.co.uk</code> domain
☐ Visit <code>/robots.txt</code>	Loads correctly, references the sitemap
☐ Check the browser tab title on the homepage	Reads "Halal Business Initiative"
☐ Check the favicon / tab icon	Shows the emerald 8-point star logo, not a broken image

7.3 Accessibility spot-checks

STEP	EXPECTED RESULT
☐ Tab through the homepage using only the keyboard	Focus moves logically through links/buttons with a visible focus outline
☐ Enable "Reduce Motion" in your OS accessibility settings, reload the homepage and /apply's thank-you screen	All animations (video autoplay aside) are disabled or minimized — no spinning, bouncing, or pulsing content

Known, already-triaged issues (not new bugs if you spot these):

- An automated accessibility scan flags a missing `<main>` landmark and one heading-order issue on the homepage/programme-terms page. These are pre-existing and tracked separately — no need to re-report them here.
- `www.takweenconnect.co.uk` may be slower to resolve than the other two URLs while DNS finishes propagating — the underlying record is correctly configured either way.
